リーディング模擬パック M01

Grade 2 Reading Mock Pack M01 ｜ 生徒用問題冊子・校内試行版

短文空所補充 17 問＋長文語句空所補充 6 問＋長文内容一致 8 問｜計 31 問

Test Guide｜実施ガイド

問題数　31 問（すべて 4 肢選択）

校内目標時間　45 分

時間配分　Q1〜17：12 分　Q18〜23：10 分　Q24〜31：18 分　見直し：5 分

注意　すべての問題に解答し、最後に解答欄のずれを確認する

本教材は特定の試験実施団体が作成・承認した公式問題ではありません。本文・設問・解答・解説は独自に作成しています。

Name and Time｜記録

氏名：＿＿＿＿＿＿＿＿＿＿　開始：＿＿:＿＿　終了：＿＿:＿＿　所要：＿＿分＿＿秒

1 Short Passages | Vocabulary Q1〜5

(1) After walking for six hours in the mountains, everyone was completely (　).

1 exhausted	2 ordinary
3 independent	4 accurate

(2) The website provides useful (　) about local volunteer activities.

1 permission	2 direction
3 information	4 attention

(3) This old bridge is no longer safe, so the city plans to (　) it next year.

1 admire	2 replace
3 include	4 recognize

(4) The train service was delayed, but it (　) returned to its normal schedule.

1 rarely	2 hardly
3 recently	4 eventually

(5) Regular exercise can help (　) some health problems.

1 borrow	2 prevent
3 translate	4 invent

1 Short Passages｜Phrases Q6〜10

(6) Because of the storm, the outdoor concert was put ( ) until Sunday.

1 away	2 out
3 off	4 up

(7) During the meeting, Aya came up ( ) a simple solution to the problem.

1 with	2 for
3 from	4 over

(8) Mr. Lee is in charge ( ) organizing the school festival this year.

1 at	2 to
3 by	4 of

(9) The team had to deal ( ) several unexpected problems during the project.

1 on	2 with
3 about	4 through

(10) Many residents were opposed ( ) the plan to close the public library.

1 for	2 with
3 to	4 against

1 Short Passages | Grammar Q11〜17

(11) Ken has worked at the hospital ( ) he graduated from college.

1 during	2 while
3 until	4 since

(12) If I had left home five minutes later, I ( ) the last bus.

1 would have missed	2 will miss
3 had missed	4 miss

(13) The new sports center, ( ) opened in April, is already popular.

1 what	2 which
3 where	4 who

(14) Neither the teacher nor the students ( ) satisfied with the new rule.

1 was	2 be
3 has	4 were

(15) The report must ( ) by Friday afternoon.

1 complete	2 have completed
3 be completed	4 be completing

(16) The box was too heavy for the child ( ) by himself.

1 to carry	2 carrying
3 carried	4 carry

(17) Not only my parents but also my sister ( ) interested in the program.

1 are	2 is
3 have	4 be

Passage A Sharing More Than Books

Public libraries have traditionally lent books, but some are now lending other useful objects as well. At a service known as a library of things, people may find tools, cooking equipment, board games, or even small machines. Many of these objects are expensive and are needed only a few times a year. (18) without spending money on something that will usually remain unused at home.

The system can also benefit the environment. Making a new product requires raw materials and energy, and delivering it to a store produces additional carbon emissions. If twenty families share one electric drill, for example, (19). Sharing can also keep unwanted objects out of the trash, especially when a library accepts donated items that are still in good condition.

Running such a service is not as simple as placing objects on shelves. Tools must be checked regularly, and users need clear instructions. Some libraries ask volunteers with repair skills to inspect each object. Staff members may also show borrowers how to use an unfamiliar machine before they take it home. These extra steps require time, (20). With careful management, a library of things can make useful objects available to more people while reducing unnecessary purchases.

(18)

1 Libraries can sell these products	2 Visitors must return every book
3 Residents can borrow what they need	4 Manufacturers can advertise new items

(19)

1 fewer new drills need to be produced	2 each family must learn to repair it
3 the library has to buy twenty shelves	4 the drill will use much more electricity

(20)

1 so most libraries refuse all donations	2 unless borrowers purchase the machines
3 because books are difficult to organize	4 but they help the service operate safely

Passage B Cool Roofs, Cooler Neighborhoods

On hot summer days, cities are often warmer than nearby rural areas. One reason is that cities contain many dark surfaces, including roads and roofs. These surfaces absorb energy from sunlight during the day and release it slowly later. As a result, (21), even after the sun has gone down. This can make summer nights uncomfortable and increase the need for air conditioning.

To deal with this problem, some building owners install cool roofs. They use light-colored or specially designed materials that reflect more sunlight than ordinary dark roofs. Because the roof absorbs less energy, (22). This may reduce the amount of electricity needed for cooling. If many buildings in one area use such roofs, the surrounding air may also become slightly cooler.

Cool roofs, however, are not a perfect solution for every building. Dust can make a roof less reflective, so it may need regular cleaning. In colder regions, a dark roof can sometimes help warm a building in winter, and replacing it may increase heating costs. The best material also depends on the shape of the building and the local weather. (23). Cool roofs can be a useful tool, but they work best as one part of a larger plan that also includes trees, shade, and energy-efficient buildings.

(21)

1 rural roads become crowded with cars	2 buildings and streets remain warm
3 people turn off their air conditioners	4 sunlight becomes stronger at midnight

(22)

1 the roof becomes darker each year	2 more sunlight enters through the windows
3 the building produces its own fuel	4 less heat enters the rooms below

(23)

1 Therefore, local conditions should be considered before installation	2 For example, every roof should be painted the same color
3 In addition, winter weather has disappeared from most cities	4 On the other hand, trees always increase heating costs

Passage A | E-mail

From	Nora Collins <nora@greenbridge-center.org>
To	All City Nature Photography Workshop participants
Date	June 12
Subject	Important changes to the weekend workshop

Dear participants,

Thank you for registering for our two-day City Nature Photography Workshop on July 6 and 7. On Saturday, please meet at the East Gate at 9:30 a.m. We had originally planned to meet in the Education Room, but that room is being repainted. Staff members in green shirts will welcome you at the gate. Before you arrive, fully charge the phone or camera you plan to use and install the free ViewNote app. We will use it to attach location notes to photographs during our walk. You do not need to buy a special camera or bring a tripod.

The weather forecast says Saturday will be unusually hot. Therefore, we have moved the afternoon walk from the open Hill Trail to the shaded Riverside Garden. The day will finish at 4:00 p.m., thirty minutes earlier than first announced. Also, the center cafe is closed while its kitchen equipment is being replaced, so please bring your own lunch. Drinking water will be available.

Sunday's session begins at 10:00 a.m. in the main auditorium. You will edit photographs and prepare a small exhibition in groups. If you cannot attend on Saturday, you may still join Sunday's session, but please e-mail me by Friday. I will send you a twenty-minute safety video and a short form, which you must complete by 9:30 on Sunday morning. Anyone who misses Sunday may send me three photographs by Tuesday for written comments, but the group exhibition will take place only on Sunday.

Best regards,
Nora Collins
Workshop Coordinator

(24) Why will participants meet at the East Gate on Saturday?

1 The Hill Trail is closed for repairs.	2 The Education Room is being repainted.
3 The main auditorium is too small.	4 The center cafe will open late.

(25) What are participants asked to do before Saturday's workshop?

1 Buy a special camera for the walk.	2 Prepare three photographs for an exhibition.
3 Reserve lunch at the center cafe.	4 Charge their device and install an app.

(26) What can a participant who misses Saturday do?

1 Contact Nora and complete safety materials before Sunday.	2 Attend the Hill Trail walk on Sunday morning.
3 Use the Education Room without contacting Nora.	4 Take part in the group exhibition on Tuesday.

Passage B｜Buildings That Can Change with Their Users

A building may stand for many decades, but the needs of the people around it can change much faster. A large office may become unnecessary when companies reduce their staff, while the same neighborhood may need classrooms or apartments. Traditionally, an owner might respond by tearing the building down and constructing a new one. This uses new materials, creates waste, and requires a great deal of energy. For this reason, some architects are designing buildings that can be adapted to different purposes over time.

An adaptable building usually has a strong, simple main structure. Inside it, walls can be removed or moved without changing the main frame. Rooms can then be made larger or smaller as users' needs change. Designers may also use standard-sized parts that are easy to replace. Pipes, wires, and air-conditioning equipment are placed where workers can reach them without opening large sections of walls or floors. These choices make future repairs and changes less disruptive.

Such flexibility does not come without challenges. Movable walls and accessible building systems may cost more at the beginning. Owners who are focused only on the next few years may be unwilling to pay the additional cost. Architects must also predict several possible future uses. For example, a building that may later become housing needs suitable locations for windows, bathrooms, and quiet private spaces. It is impossible to prepare for every future use, so designers must decide which kinds of change are most likely.

Another approach is to give an existing building a new purpose. Old warehouses have become markets, and former schools have become community centers. However, not every old building is suitable. Engineers must check its safety, and improvements may be needed for insulation or better access for people with disabilities. Asking local residents what they need is also important. Without their opinions, a renovated building may look attractive but provide services that few people use. Whether architects plan a new adaptable building or reuse an old one, the goal is similar: keeping useful structures in service for longer.

3 Reading for Details｜Questions 27〜31

(27) What is one main purpose of designing an adaptable building?

1 To make every room the same size.	2 To avoid all repairs in the future.
3 To keep the building useful as needs change.	4 To limit the building to one type of user.

(28) Why are removable interior walls useful?

1 They allow room sizes to change without altering the main frame.	2 They make windows unnecessary in future housing.
3 They prevent owners from changing the building's purpose.	4 They produce energy for air-conditioning equipment.

(29) What challenge of adaptable buildings is mentioned?

1 Their main frames are always weak.	2 They cannot contain pipes or wires.
3 They must be used as offices first.	4 Flexible features may increase the initial cost.

(30) Why should local residents be asked for their opinions?

1 To let them choose the building's paint color.	2 To make the reused building serve actual local needs.
3 To avoid having engineers check the building's safety.	4 To make every old building into a community center.

(31) Which of the following statements is true?

1 Architects can prepare a building for every possible future use.	2 All old buildings can be reused without major improvements.
3 Both adaptable design and reuse can extend a building's useful life.	4 Owners always prefer paying more for flexible building systems.
